PENDOMONIUM 2024

**Organizations' unsung
heroes: Internal PMs and
the value they drive**

Agenda

- **My take on the Internal PM role**
- **Internal vs External PM role**
- **Balancing Data Sources**
- **Use case: Internal Developer Portal**

Hi, my name is Andrei!

Role: Sr Product Manager, Asana, Observability & Feature Scaling teams

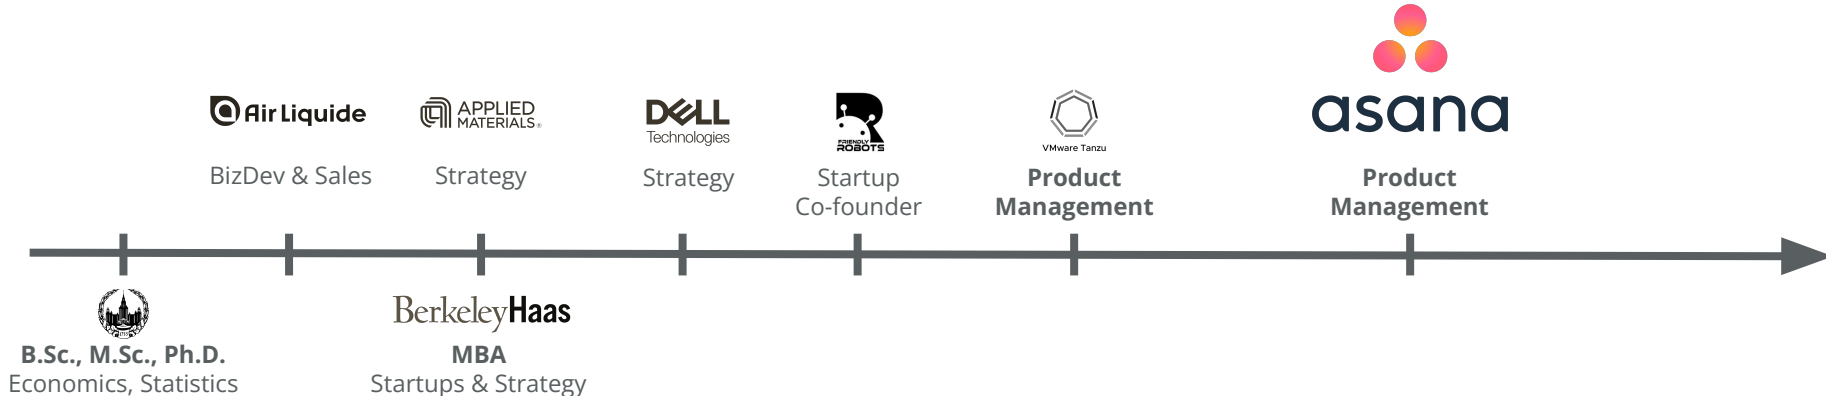

Specialty: Enterprise software, SaaS, DevEx, and User Research

Superpowers:

- deep empathy for users & customers
- facilitating transparent collaboration across the org
- natural optimism, resilience, and a sense of humor

Skills:

Core PM	Communication
Strategy	BizDev & Sales
Technology	Startups

PENDOMONIUM 2024

The #1 AI work management platform

The role of an Internal Product Manager

✓ Function is not necessarily called “Product Manager”

✓ Strategic about spending company’s resources & time

✓ Worried about internal users’ well-being & productivity

✓ Develops & presents new initiatives to leadership to secure buy-in

✓ Treats internal processes & frameworks as “products”

✓ Interacts with various functions (eng, design, PMO, etc.) to get initiatives executed

Internal PM can deliver a ton of value for your org

 **Voice of your users.** When employee experience is a critical success factor, it is important to treat internal users as customers.

 **Product mindset evangelist.** Treats your internal tools & processes as products & experiences.

 **Roadmap owner.** Turns user pain points into strategic initiatives and gets leadership buy-in

External vs internal PM – key similarities & differences

	External PM	Internal PM
Focus on users & customers	Yes! External users	Yes! Internal users
Organization's buy-in	Most are clear why a PM is needed	Leadership needs to convince the org that they need a PM
Process vs feature work	Primarily feature work	Combination of process & feature work

Internal PM role - key challenges

**Lack of
support resources**

**Larger scope
of responsibility**

**Tech Debt
heavy roadmap**

**KTLO
constraint**

Internal PM role - key challenges (cont'd)

Buy (not build) trap

Internal urgency trap

**Program management
trap**

**Fewer data sources
available**

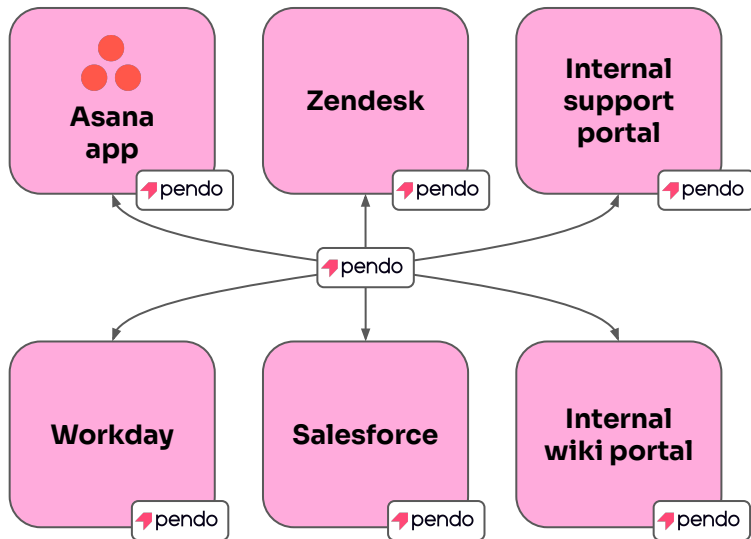

**Data is critical to your
PM's success**

Balancing the data sources: Current state

Data Source	Frequency of observations	Availability for internal PMs	Cost per insight
Interviews & deep dives	One-off		
Surveys	Usually semi-annual or annual		
Telemetry	Continuous, usually limited to each tool's perimeter		

How internal telemetry (done right) aids an internal PM

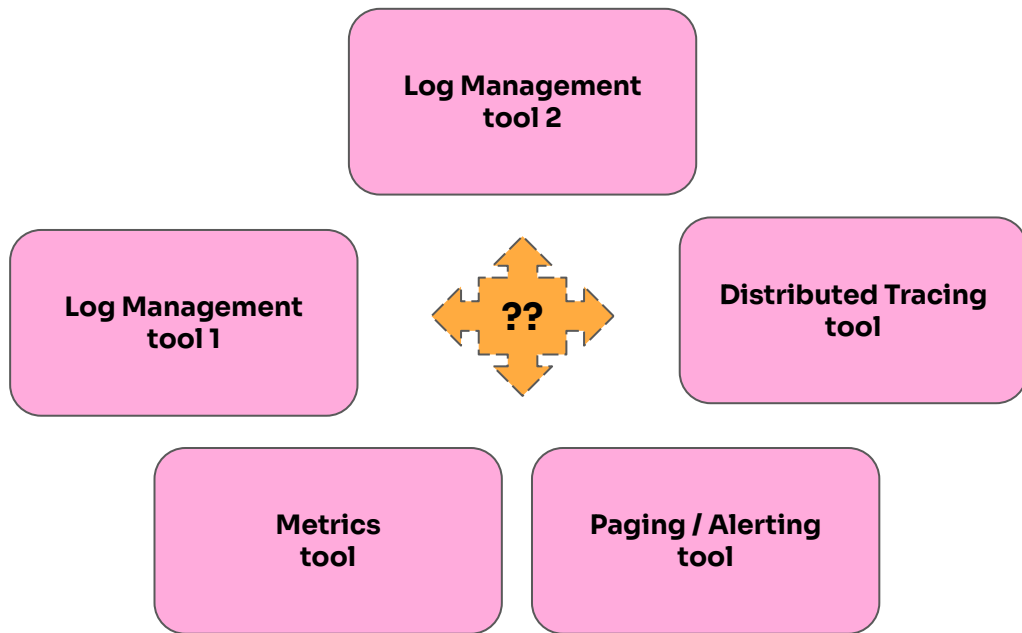

Obstacles:

- Various tools provide different insights into their tool's usage
- Many workflows span across multiple apps, and it's hard to see the full picture
- Telemetry instrumentation is usually a complex engineering task

Solution:

- Consider a tool like Pendo for Employees so that a PM can observe complex workflows and propose meaningful improvements

Example: Internal observability tools

- Little insight into how each tool is being used
- Little insight into how the tools are being used *together*
- Little understanding where exactly the users are struggling
- Best practice: Tools should be used together to resolve prod issues

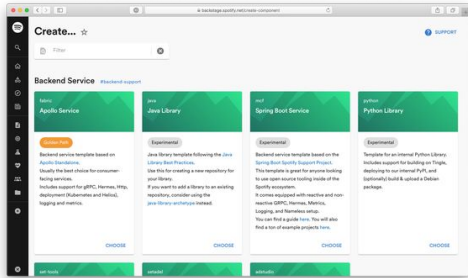

Use case: Internal Developer Portal

Problem statement:

- Developers have a hard time finding information about the org's digital assets
- Information is fragmented & out of date
- New developers need significant time to onboard and get up to speed

Use case: Internal Developer Portal

Solution:

- Revamping / consolidation of an internal dev portal

Impact:

- Bring value to the organization by improving developer efficiency
- Showcase the value of telemetry to measure user engagement

Experience Points (XP) for an internal PM:

- Discover what the users want, what is broken in the current systems, and how to improve
- An internal portal usually justifies design support and a dedicated eng team

Conclusion & Q&A

Recap:

- Internal PM role is key to bring value to internal users & the whole org
- Internal & External PMs have much in common, yet they differ
 - scope, build vs buy, feature vs process
- Data is critical to internal PMs success; has to be done right

Happy to answer your questions!
